

**Notice Regarding the End of Development
and Software Maintenance Support for Nuage**

Thank you for your continued support of Yamaha's Nuage DAW System.

Since its launch in April 2013, Nuage has been trusted by audio professionals worldwide as a control system for Steinberg Nuendo and Cubase, supporting music and post-production workflows for more than a decade.

As operating systems and DAW applications continue to evolve, Yamaha has reviewed the future of the Nuage platform and has decided to conclude further development of Nuage. Software updates, bug fixes, and compatibility verification will officially end on September 30, 2026.

Maintaining compatibility with future platforms would require a substantial redesign of the underlying software architecture. Given these challenges, we can no longer ensure the level of stability, reliability, and long-term compatibility that our customers expect.

Development activities for Nuage will conclude following compatibility verification for Nuendo 15 and Cubase 15.

Yamaha will not conduct compatibility verification for future versions of operating systems, Nuendo, Cubase, or other DAW software released thereafter.

Technical support related to the operation and use of Nuage products will continue beyond September 30, 2026. However, no further software updates, bug fixes, or compatibility updates are planned after that date.

Yamaha will also continue to provide repair service, subject to the availability of replacement parts.

We are proud that Nuage has supported creative professionals and leading production facilities around the world for more than a decade, and we sincerely thank all Nuage users for their trust and support throughout the years.

Thank you for your understanding.
